

TWO METHODS HOW TO REMOVE YOUR EVA RUNNING TRACK PADS FROM YOUR FERRIS CAT WHEEL

1. PRESSURE HOSE:

- a. take wheel outside - cover wheelbase with plastic - then replace the wheel back on.
- b. Use pressure hose. It makes a mess with bits flying everywhere - but you work slowly - and it will come off.

2. SCRAPING:

- a. work in a warm room, and use a hair blow dryer on hot setting along with a scraper/spatula.
- b. You can also work in a bit of Goo-B-Gone as you go. Patience and “elbow grease” will get the job done!

Either way is very laborious. This glue is intended to hold strong for your cat's safety.

PLEASE share any tips or tricks! Let us know how it goes! info@ziggydoo.com
